Abstract

Phytogen Seed Company, LLC has developed a new Roundup Ready® Flex Pima Variety, PHY811RF. PHY811RF Pima is a product of the Company's San Joaquin Valley cotton breeding program and has shown excellent yield potential and high fiber quality over multiple location/years of testing. PHY811RF Pima is broadly adapted, high yielding and possesses excellent fiber quality. PHY811RF Pima has shown a 3% lint yield improvement, significantly improved fiber uniformity and elongation over the current leading market acreage variety, PHY805RF Pima. PHY811RF Pima is an early-mid maturity, Fusarium race 4 resistant Pima variety most similar to PHY800 Pima. PHY811RF Pima reflects Phytogen's ongoing commitment to provide growers with advanced technologies carried in high yielding varieties delivering outstanding spinning performance. Planting seed of PHY811RF Pima will be available in limited supply for 2013.
